Nursys E-Notify is an innovative notification system developed by NCSBN. In collaboration with boards of nursing and is provided as a free service in support of boards of nursing's mission of public protection. Any institution that employs nurses or maintains a nurse registry can utilize E-Notify to track licensure and discipline information. [[00:00:24]] Let's learn just how easy, quick and efficient it is. NCSBN's Nursys is the only national database for verification of nurse licensure, discipline, and practice privileges for RNs, APRNs and LPN/VNs from participating boards of nursing. US boards of nursing and its territories push their licensing and discipline data, including board of nursing publicly available alerts to nurses through frequent, secure updates. Through a written agreement, participating boards have designated Nursys as their primary source equivalent and authorized [[00:00:59]] to nurses to share publicly available data. E-Notify is the simple, one-stop shop for monitoring the licensure and discipline status of nurses. The system automatically sends board of nursing issued publicly available alerts directly to institutions as the information is entered into Nursys by boards of nursing. You'll now learn these vital details as soon as they are reported. You can also use E-Notify to receive reminders of licensed renewals for your nurses. Signing up for E-Notify is simple. [[00:01:30]] Register your institution in just a few easy steps. First, add information about your institution. Then, sign up as an administrator and set up additional users from your institution as needed. This is a great option for large nurse employers with multiple locations. You can edit your information any time details change. Now, your institution is registered with a secure E-Notify account. Adding your nurses to your registered institution nurses list is fast and easy. [[00:01:59]] First, you need the license number, license type, and the state that issued the license to identify your nurse in Nursys, which then matches the provided nurse identifiers with the data from boards of nursing. Add nurses individually or several nurses at one time. Sample files are available to help make this process seamless. Larger institutions can also enroll a large number of nurses directly from their systems. For added security, E-Notify does not store the employer-provided nurse license identifying information. [[00:02:31]] It simply uses it to identify and match your nurses from Nursys. You can add, delete, or edit nurses with just a few easy clicks. You'll be contacted by an email when the following changes are made to your nurse's record: active status, license status, including disciplinary actions or board of nursing issued publicly available alerts, and license expiration. The authorization to practice map provides a visual representation [[00:02:59]] of where each nurse can practice as a registered or licensed practical nurse. Both the map and list view are available. The best part of E-Notify is that it is a completely free service. Save time, money and resources while reducing the overall risk of missing important information from your boards of nursing about the licensure and discipline status of your nurses. Register for Nursys E-Notify today at Nursys.com.
