Introduction

The mission of the National Council of State Boards of Nursing (NCSBN) is to lead in nursing regulation by assisting member boards, collectively and individually, to promote safe and effective nursing practice in the interest of protecting public health and welfare.

NCSBN serves as a consultant, liaison, advocate and researcher to its members, and as an education and information resource to policy makers and the general public. This publication provides statistics on the licensing activities of NCSBN's member boards and its two licensure examinations, the National Council Licensure Examination for Practical Nurses (NCLEX-PN®) and the National Council Licensure Examination for Registered Nurses (NCLEX-RN®).

Part I – Licensure Statistics

The data reported in Part I of this document include licensing statistics of the 60* state and territorial boards of nursing. The numbers of new licenses by endorsement and examination, as well as the total number of active licenses, are provided for each jurisdiction.

The data included in this section provide licensing statistics for the period July 1, 2004 – June 30, 2005.

Part II – NCLEX® Examination Statistics

The NCLEX-RN and NCLEX-PN examinations are administered on behalf of NCSBN's 60* member boards. The purpose of these examinations is to determine if a candidate possesses the minimum knowledge and abilities to provide entry level nursing care that is safe and effective.

Candidate performance on the NCLEX-RN and NCLEX-PN examinations is summarized and reported by quarter and year. This section provides a detailed report of the NCLEX examinations statistics for Jan. 1 – Dec. 31, 2005. Additionally, summaries of historical data from April 1, 1994, are also included.

* At the time of the survey there were 60 member boards; there are currently 59.

Part I

2005 Licensure Statistics

The data reported in this section indicate licensure processing activity and data on the total number of individuals licensed to practice within each jurisdiction during July 1, 2004 – June 30, 2005. All data was obtained from state and territorial boards of nursing.

Estimates were provided where the exact figure requested for this collection of data was unknown.

Data are presented in a series of tables. Table 1 lists the National Council of State Boards of Nursing (NCSBN) member boards, the geographic locality within which a board has responsibility for regulating nursing practice (JD), the types of licenses for which a board has licensing authority, and whether or not the board is empowered to issue licenses or certificates to practice in a specialty area of nursing. Tables 2–5 provide data related to new licenses issued by endorsement or examination, total numbers of active licenses (both RN and LPN/VN) by jurisdiction, and graduates of foreign nursing programs licensed, by jurisdiction. Table 6 provides a summary of licensing activities by examination and endorsement for RNs, LPN/VNs and graduates of foreign nursing programs. Tables 7 and 8 provide the numbers of active specialty licenses, issued within each jurisdiction, by specialty license category. Figure 1 provides a review of the numbers of active licenses for the years 1995–2005. Unless noted otherwise, all percentages are calculated in terms of column totals.

Key Terms

Registered nurses (RNs) and licensed practical or vocational nurses (LPN/VNs) obtain licensure by endorsement (if licensed in another jurisdiction) or by examination (if the applicant has never taken the appropriate NCLEX® examination).

ACTIVE LICENSE figures are based on the reported actual or estimated total number of individuals holding an active license within a jurisdiction and represent the nurses available for employment. Due to an unknown number of individuals holding active licenses in more than one jurisdiction, the total number of active licenses nationwide may be higher than the total number of nurses.

ADVANCED PRACTICE LICENSES / AUTHORITY TO PRACTICE figures and tables contain data for advanced practice registered nurse (APRN) groups: certified registered nurse anesthetist (CRNA), certified nurse midwife (CNM), certified nurse specialist (CNS), CNS-PSYCH/mental health and nurse practitioner (NP).

ABBREVIATIONS are followed by the category of advanced practice/authority to practice license:

CNM — Certified Nurse Midwife

CRNA — Certified Registered Nurse Anesthetist

CNS-PSYCH — Clinical Nurse Specialist – Psychiatry and/or Mental Health (including all its subspecialties)

CNS — Clinical Nurse Specialist (all others)

Figure 1. Total Number of Active Licenses: Registered Nurses and Licensed Practical/Vocational Nurses, 1995 – 2005

* In 2005, there was no information available for American Samoa, Guam and Puerto Rico.

2005 total includes 518,295 RN and 136,901 LPN/VN active licenses reported in 2004 for Colorado, District of Columbia, Florida, Indiana, Maryland, Montana, Utah, Virginia and Virgin Islands.

In 2004, no information was available for American Samoa, Delaware, Georgia PN and RN, Guam, Illinois and Puerto Rico.

PART II**2005 NCLEX® Examination Statistics****Introduction**

In 1982, NCSBN revised the State Board Test Pool Examination (SBTPE) substantially. NCSBN changed the examination from a norm-referenced test to a criterion-referenced test, implemented a new test plan and used Rasch's (1960) one parameter logistic model to calibrate items and measure candidates' abilities. At this time, NCSBN renamed the examinations the National Council Licensure Examination for Registered Nurses (NCLEX-RN®) and the National Council Licensure Examination for Practical Nurses (NCLEX-PN®). However, these NCLEX® examinations were very different than the NCLEX examinations taken by candidates today. These examinations were administered only twice a year in a pencil and paper format, and each administration lasted two days.

In 1986, the NCSBN Board of Directors funded an initial investigation on the feasibility of using Computerized Adaptive Testing (CAT) procedures. CAT held the promise to make tests available year round, make tests shorter by only giving candidates items that were appropriate for their ability and provide greater security for the content of the items. On April 1, 1994, NCSBN began administering the NCLEX-RN and NCLEX-PN examinations exclusively via CAT. This publication provides a detailed breakdown of candidate performance for 2005, as well as historical data.

Computerized Adaptive Testing (CAT)

CAT is a method of administering examinations that combines the power and speed of current computer technology with modern measurement theory. With CAT, each candidate's test is unique; it is assembled interactively as the individual is tested. As the candidate answers each question, the computer

calculates an ability estimate based on all earlier answers. The test administration software then identifies the content area for the next item. Next, the software scans through the available items within the identified content area for an item that has a degree of difficulty sufficient to give the candidate approximately a 50% chance of answering it correctly. This item is selected and presented to the candidate on the computer screen. This process is repeated for each item, creating an examination tailored to the individual's ability level while fulfilling all NCLEX test plan requirements. The examination continues in this way until a pass-fail decision can be determined. Because the test could end at any time after the minimum number of items has been answered, it is important that the test plan specifications are met throughout the entire test.

Setting the Passing Standard

To ensure a consistent standard of competence in nursing practice, NCSBN uses a criterion referenced standard, which means that passing or failing depends solely upon a candidate's level of performance in relation to the established point that represents safe entry-level competence. There is no preassigned percentage of candidates that pass or fail each examination. Because the practice of nursing changes over time, it is necessary to reevaluate the appropriateness of the passing standard from time to time. To ensure that the passing standards for the NCLEX-RN and NCLEX-PN examinations accurately reflect the amount of nursing ability currently required to practice competently at the entry level, NCSBN's Board of Directors reevaluates the passing standard every three years or when the test plan changes. In evaluating the passing standard, they consider information from a variety of sources. Although there is no limit on the information that

they may consider, they are typically presented with the following information:

1. The results of a standard setting exercise undertaken by the Panel of Judges. Currently, this exercise consists of a modified Angoff procedure, with additional statistical compromise procedures. Also, a list of the members on the Panel of Judges and their qualifications is included.
2. An historical record of the passing standard and annual summaries of candidate performance on the NCLEX examination since the implementation of the CAT methodology in 1994.
3. The results from the annual Standard Setting Survey, which solicits the opinions of employers and educators regarding the competence of the current cohort of entry-level nurses.
4. Information detailing the educational readiness of high school graduates who expressed an interest in nursing.

In April 1998, the passing standard for the NCLEX-RN examination was increased from -0.42 logits to -0.35 logits. In April 2001, this standard was retained for another three years. However, in April 2004, the standard was increased to -0.28 logits. The passing standard for the NCLEX-PN examination has experienced a similar increase over time. In April 1999, the passing standard for the NCLEX-PN examination was increased from -0.51 logits to -0.47 logits. In April 2002, this standard was retained for another three years. In April 2005, the NCLEX-PN passing standard was increased from -0.47 to -0.42 logits. It is important to note that the RN and PN standards are not directly comparable because they are based on different item pools and different scopes of practice.

Pass-Fail Decisions

Candidate performance on the NCLEX examinations is reported only as a pass-fail decision. Scores are never reported. As a result, almost all the statistics presented here are pass rates or statistics based upon a pass-fail decision.

To make pass-fail decisions, the computer seeks to determine with 95% certainty whether the candidate's true ability is above or below the passing standard. To do this, three pieces of information must be known: the current person ability estimate, the precision of that estimate and the passing standard. After the minimum number of items has been answered, the computer compares the candidate's ability level to the standard required for passing. Candidates clearly above the passing standard pass. Candidates clearly below the passing standard fail.

If the candidate's ability level is close enough to the passing standard that it is not clear which side of the passing standard his or her ability falls, the computer continues asking items. As more items are answered, the candidate's ability estimate becomes more precise. After each item, the candidate's ability level is recomputed, using all of the information (answers to all the items asked) available at that point. When it becomes clear on which side of the passing standard the candidate's ability falls, the examination ends.

Some candidates' abilities, of course, are very close to the passing standard. For these candidates, all items in the item pool might not provide enough information to be certain their ability is truly above or below the passing standard. These are the candidates who take the maximum number of items. Once the maximum number of items has been administered, the computer waives the 95% certainty requirement and makes a pass or fail decision based upon the candidate's final ability estimate. If the candidate's ability estimate is above the passing standard, the candidate passes. If not, he or she fails.

If an NCLEX examination ends because time runs out, then the computer does not have enough information to make a clear pass-fail decision; if it did, it already would have stopped administering items. However, when the response patterns of people who ran out of time were investigated, it was found that some had been performing consistently above the passing standard, and their “true” ability level appeared to be above passing, although close to it. A mechanism is therefore provided for these candidates to pass. The key word here is “consistently.” If a candidate’s ability estimate has been consistently above the passing standard over the last 60 items, then he or she will pass, despite having run out of time.

Table 1. Candidates Taking the NCLEX-RN® Examination, by Type of Candidate, Jan. 1 – Dec. 31, 2005¹

¹ Performance of RN Educational Programs. The following is a summary of the 2005 NCLEX pass rates for U.S. RN education programs based upon first-time candidate performance: In 2005, 1,601 U.S. RN programs had at least one first-time candidate. The mean pass rate for those programs was 85.2% (SD 14.9%). When including only those programs with at least 10 first-time examinees (N=1,503) the mean pass rate was 86.9% (SD 9.5%).

Table 2. Summary Statistics for First-Time, U.S.-Educated Candidates Taking the NCLEX-RN® Examination, Jan. 1 – Dec. 31, 2005

Passing Standard ¹	-0.28 logits
Estimated Decision Consistency ²	0.91
Average Test Length ³	120 items
Percent of Candidates Taking the Minimum Number of Items	51.9%
Percent of Candidates Taking the Maximum Number of Items	14.5%
Average Testing Time ⁴	2 hours, 14 minutes
Percent of Candidates Taking the Maximum Amount of Time	0.7%

¹ The NCLEX-RN passing standard scale uses logits as the unit of measurement. Logits is short for log-odds-units. These units have no inherent meaning with regard to nursing content and in fact have an arbitrary zero point, but logits are practical because the probability of a correct response can easily be computed when the candidate's ability and the item's difficulty are known. Typically, the logit range on the NCLEX-RN scale is from -2.00 (easy items or low ability candidates) to 2.00 (difficult items or high ability candidates).

² Estimated decision consistency is an indicator of reliability. Conceptually, it is the proportion of pass-fail decisions that would remain the same if the same population were retested immediately after their first test (assuming no learning or fatigue effects) using a different set of items.

³ NCLEX-RN examinations consist of 75 to 265 items.

⁴ On Oct. 1, 2004, the standard amount of allotted testing time increased from 5 to 6 hours.

Repeat, Internationally Educated	372	94	25.3	451	83	18.4	458	101	22.1	498	121	24.3
All Candidates	15,041	12,290	81.7	12,221	9,258	75.8	22,839	19,131	83.8	15,314	11,733	76.6

¹ Performance of PN Educational Programs. The following is a summary of the 2005 NCLEX pass rates for U.S. PN education programs based upon first-time candidate performance: In 2005, 1,352 U.S. PN programs had at least one first-time candidate. The mean pass rate for those programs was 89.1% (SD 14.8%). When including only those programs with at least 10 first-time examinees (N=1,208), the mean pass rate was 90.2% (SD 10.7%).

Table 10. Summary Statistics for First-Time, U.S.-Educated Candidates Taking the NCLEX-PN® Examination, Jan. 1 – Dec. 31, 2005

Passing Standard ²	0-.42 logits ¹
Estimated Decision Consistency ³	0.92
Average Test Length ⁴	110 items
Percent of Candidates Taking the Minimum Number of Items	61.0%
Percent of Candidates Taking the Maximum Number of Items	13.4%
Average Testing Time ⁵	1 hour, 58 minutes
Percent of Candidates Taking the Maximum Amount of Time	0.6%

¹ On April 1, 2005, the NCLEX-PN passing standard increased from -0.47 to -0.42 logits.

² The NCLEX-PN scale uses logits as the unit of measurement. Logits is short for log-odds-units. These units have no inherent meaning with regard to nursing content and, in fact have an arbitrary zero point, but logits are practical because the probability of a correct response can easily be computed when the candidate's ability and the item's difficulty are known. Typically, the logit range on the NCLEX-PN scale is from -2.00 (easy items or low ability candidates) to 2.00 (difficult items or high ability candidates).

³ Estimated Decision Consistency is an indicator of reliability. Conceptually, it is the proportion of pass-fail decisions that would remain the same if the same population were retested immediately after their first test (assuming no learning or fatigue effects) using a different set of items.

⁴ NCLEX-PN examinations consist of 85 to 205 items.

⁵ The standard amount of allotted testing time for the NCLEX-PN examination is 5 hours.
