## INTRODUCTION

The mission of the National Council of State Boards of Nursing (NCSBN®) is to provide leadership to advance regulatory excellence by assisting member boards, collectively and individually, and to promote safe and effective nursing practice in the interest of protecting public health and welfare.

NCSBN serves as a consultant, liaison, advocate and researcher to its members, and as an educational and informational resource to policy makers and the general public. This publication provides statistics on the licensing activities of NCSBN's member boards and its two licensure examinations, the National Council Licensure Examination for Practical Nurses (NCLEX-PN®) and the National Council Licensure Examination for Registered Nurses (NCLEX-RN®).

### Part I – Licensure Statistics

The data reported in Part I of this document include licensing statistics of the 60 state and territorial boards of nursing. The numbers of new licenses by endorsement and examination, as well as the total number of active licenses, are provided for each jurisdiction.

The data included in this publication provide licensing statistics for the period Jan. 1, 2014, to Dec. 31, 2014.

### Part II – NCLEX® Examination Statistics

The NCLEX-RN and NCLEX-PN examinations are administered on behalf of 59 of the 60 NCSBN Member Boards (excluding the Nebraska Advanced Practice Registered Nurse Board, which is not responsible for administering entry-level nurse licensure). The purpose of these examinations is to determine if a candidate possesses the minimum knowledge and abilities to provide entry-level nursing care that is safe and effective.

Candidate performance on the NCLEX-RN and NCLEX-PN examinations is summarized and reported by quarter and year. This publication provides a detailed breakdown of candidate performance for 2014, as well as historical data.

## PART I – LICENSURE STATISTICS

The data reported in this section indicate licensure processing activity and the total number of individuals licensed to practice within each jurisdiction from Jan. 1, 2014 to Dec. 31, 2014. All data was obtained from state and territorial boards of nursing (BONs).

Estimates were provided where the exact figure requested for this collection of data was unknown.

Data are presented in a series of tables. Table 1 lists the NCSBN member boards, the geographic locality where a BON has responsibility for regulating nursing practice (JD), the types of licenses for which a BON has licensing authority, and whether or not the BON is empowered to issue licenses or certificates to practice in a specialty area of nursing. Tables 2 through 4 provide data related to new licenses issued by endorsement or examination and total numbers of active licenses (both registered nurse [RN] and licensed practical/vocational nurse [LPN/VN]) by jurisdiction. Table 5 provides a summary of licensing activities by examination and endorsement for RNs, LPN/VNs. Tables 6 and 7 provide the numbers of active specialty licenses issued within each jurisdiction by specialty license category. Figure 1 provides a review of the numbers of active licenses for the years 2005–2014. Unless noted otherwise, all percentages are calculated in terms of column totals.

### Key Terms

**RNs** and **LPN/VNs** obtain licensure by endorsement (if licensed in another jurisdiction) or by examination (if the applicant has never taken the appropriate NCLEX® examination).

**Active license** figures are based on the reported actual or estimated total number of individuals holding an active license within a jurisdiction and represent the nurses available for employment. Due to an unknown number of individuals holding active licenses in more than one jurisdiction, the total number of active licenses nationwide may be higher than the total number of nurses.

**Advanced practice licenses/authority to practice** figures and tables contain data for advanced practice registered nurse (APRN) groups: certified registered nurse anesthetist (CRNA); certified nurse midwife (CNM); clinical nurse specialist (CNS); and certified nurse practitioner (CNP).

## 2014 LICENSURE STATISTICS

Table 1 lists the NCSBN Member Boards' jurisdiction and the types of licenses for which a BON has licensing authority.

## PART II – NCLEX® EXAMINATION STATISTICS

### Introduction

In 1982, NCSBN substantially revised the State Board Test Pool Examination (SBTPE). NCSBN changed the examination from a norm-referenced test to a criterion-referenced test, implemented a new test plan and used Rasch's (1960) one parameter logistic model to calibrate items and measure candidates' abilities. At that time, NCSBN renamed the examinations the National Council Licensure Examination for Registered Nurses (NCLEX-RN®) and the National Council Licensure Examination for Practical Nurses (NCLEX-PN®). However, these NCLEX® examinations were very different than the NCLEX examinations taken by candidates today. These examinations were only administered twice a year in a pencil-and-paper format; each administration lasted two days.

In 1986, the NCSBN Board of Directors (BOD) funded an initial investigation on the feasibility of using computerized adaptive testing (CAT) procedures. CAT held the promise of making examinations available year round, shortening examination length by only giving candidates items that were appropriate for their ability and providing greater security for the content of the items. On April 1, 1994, NCSBN began administering the NCLEX-RN and NCLEX-PN Examinations exclusively via CAT. This publication provides a detailed breakdown of candidate performance for 2014, as well as historical data.

### CAT

CAT is a method of administering examinations that combines the power and speed of current computer technology with modern measurement theory. With CAT, each candidate's test is unique; it is assembled interactively as the individual is tested. As the candidate answers each question, the computer calculates an ability estimate based on all earlier answers. The test administration software then identifies the content area for the next item. Next, the software scans through available items within the identified content area for an item that has a degree of difficulty sufficient to give the candidate approximately a 50 percent chance of answering it correctly. This item is selected and presented to the

candidate on the computer screen. This process is repeated for each item, creating an examination tailored to the individual's ability level, while fulfilling all NCLEX test plan requirements. The examination continues in this way until a pass-fail decision can be determined. Because the examination could end at any time after the minimum number of items has been answered, it is important that the test plan specifications are met throughout the entire test.

### Setting the Passing Standard

To ensure a consistent standard of competence in nursing practice, NCSBN uses a criterion-referenced standard, which means that passing or failing depends solely upon a candidate's level of performance in relation to the established point that represents safe entry-level competence. There is no preassigned percentage of candidates that pass or fail each examination. Because the practice of nursing changes over time, it is necessary to reevaluate the appropriateness of the passing standard from time to time. To ensure that the passing standards for the NCLEX-RN and NCLEX-PN examinations accurately reflects the knowledge, skills and abilities essential for entry-level nurse practice, NCSBN's BOD reevaluates the passing standard every three years or when the test plan changes. In evaluating the passing standard, the BOD considers information from a variety of sources. Although there is no limit on the information it may consider, the BOD is typically presented with the following information:

1. The results of a standard-setting exercise undertaken by the panel of judges. Currently, this exercise consists of a modified Angoff procedure with additional statistical compromise procedures. A list of the members on the panel of judges and their qualifications is also included.
2. A historical record of the passing standard and annual summaries of candidate performance on the NCLEX examination since the implementation of the CAT methodology in 1994.
3. The results from the annual standard-setting survey, which solicits the opinions of employers

and educators regarding the competence of the current cohort of entry-level nurses.

4. Information detailing the educational readiness of high school graduates who expressed an interest in nursing.

In April 1998, the passing standard for the NCLEX-RN Examination increased from  $-0.42$  logits to  $-0.35$  logits. In April 2001, this standard was retained for another three years. In April 2004, the standard increased to  $-0.28$  logits. In April 2007, the standard increased again to  $-0.21$  logits. In April 2010, the standard increased to  $-0.16$  logits. In April 2013, the standard increased to  $0.00$  logits.

The passing standard for the NCLEX-PN Examination has experienced a similar increase over time. In April 1999, the passing standard for the NCLEX-PN Examination increased from  $-0.51$  logits to  $-0.47$  logits. In April 2002, this standard was retained for another three years. In April 2005, the NCLEX-PN passing standard increased from  $-0.47$  to  $-0.42$  logits. In April 2008, the standard increased to  $-0.37$  logits. In April 2011, the standard increased to  $-0.27$  logits. In April 2014, the standard increased to  $-0.21$  logits. It is important to note that the RN and PN standards are not directly comparable because they are based on different item pools and different scopes of practice.

### Pass-Fail Decisions

Candidate performance on the NCLEX examinations is reported only as a pass-fail decision. Scores are never reported. As a result, almost all the statistics presented here are pass rates or statistics based upon a pass-fail decision.

To make pass-fail decisions, the computer seeks to determine with 95 percent certainty whether the candidate's true ability is above or below the passing standard. To do this, three pieces of information must be known: the current person ability estimate, the precision of that estimate and the passing standard. After the minimum number of items has been answered, the computer compares the candidate's ability level to the standard required for passing. Candidates clearly above the passing standard pass. Candidates clearly below the passing standard fail.

If the candidate's ability level is close enough to the passing standard that it is not clear which side of the passing standard his or her ability falls, the computer continues asking items. As more items are answered, the candidate's ability estimate becomes more precise. After each item, the candidate's ability level is recomputed, using all of the information (answers to all the items asked) available at that point. When it becomes clear on which side of the passing standard the candidate's ability falls, the examination ends.

Some candidates' abilities are very close to the passing standard. For these candidates, all items in the item pool might not provide enough information to be certain their ability is truly above or below the passing standard. These are the candidates who take the maximum number of items. Once the maximum number of items is administered, the computer waives the 95 percent certainty requirement and makes a pass or fail decision based upon the candidate's final ability estimate. If the candidate's ability estimate is above the passing standard, the candidate passes. If not, he or she fails.

If an NCLEX examination ends because time runs out, then the computer does not have enough information to make a clear pass-fail decision; if it did, it already would have stopped administering items. However, when the response patterns of people who ran out of time were investigated, it was found that some had been performing consistently above the passing standard, and their ability level appeared to be above passing, although close to it. A mechanism is therefore provided for these candidates to pass. The key word here is "consistently." If a candidate's ability estimate has been consistently above the passing standard over the last 60 items, then he or she will pass, despite having run out of time.

## PART II – 2014 NCLEX® EXAMINATION STATISTICS

<sup>1</sup> Performance of RN Educational Programs. The following is a summary of the 2014 NCLEX pass rates for U.S. RN education programs based upon first-time candidate performance: In 2014, 2,217 U.S. RN programs had at least one first-time candidate. The mean pass rate for those programs was 79.9% (SD 17.9%). When including only those programs with at least 10 first-time examinees (N=2,053) the mean pass rate was 81.1% (SD 14.7%).

**Table 2. Summary Statistics for First-Time, U.S.-Educated Candidates**

NCLEX-RN®	January – December 2014
Passing Standard <sup>1</sup>	0 logits
Estimated Decision Consistency <sup>2</sup>	0.89
Average Test Length <sup>3</sup>	129 items
Percent of Candidates Taking the Minimum Number of Items	44.9%
Percent of Candidates Taking the Maximum Number of Items	17.0%
Average Testing Time <sup>4</sup>	2 hours, 30 minutes
Percent of Candidates Taking the Maximum Amount of Time	1.8%

1 The NCLEX-RN passing standard scale uses logits as the unit of measurement. Logits is short for log-odds-units. These units have no inherent meaning with regard to nursing content and in fact have an arbitrary zero point, but logits are practical because the probability of a correct response can easily be computed when the candidate's ability and the item's difficulty are known. Typically, the logit range on the NCLEX-RN scale is from -2.00 (easy items or low ability candidates) to 2.00 (difficult items or high ability candidates).

2 Estimated decision consistency is an indicator of reliability. Conceptually, it is the proportion of pass-fail decisions that would remain the same if the same population were retested immediately after their first test (assuming no learning or fatigue effects) using a different set of items.

3 NCLEX-RN Examinations consist of 75 to 265 items.

4 The standard amount of allotted testing time for the NCLEX-RN Examination is six hours.

<sup>1</sup> Performance of PN Educational Programs. The following is a summary of the 2014 NCLEX pass rates for U.S. PN education programs based upon first-time candidate performance: In 2014 1,622 US PN programs had at least one first-time candidate. The mean pass rate for those programs was 81.9% (SD 22.0%). When including only those programs with at least ten first-time examinees (N=1,335), the mean pass rate was 83.6% (SD 17.6%).

**Table 10. Summary Statistics for First-Time, U.S.-Educated Candidates**

NCLEX-PN®	January – December 2014
Passing Standard <sup>1</sup>	changed from -0.27 to -0.21 on Apr. 1, 2014
Estimated Decision Consistency <sup>2</sup>	0.9
Average Test Length <sup>3</sup>	116
Percent of Candidates Taking the Minimum Number of Items	54.3%
Percent of Candidates Taking the Maximum Number of Items	17.0%
Average Testing Time <sup>4</sup>	2 hours, 16 minutes
Percent of Candidates Taking the Maximum Amount of Time	1.6%

<sup>1</sup> The NCLEX-PN scale uses logits as the unit of measurement. Logits is short for log-odds-units. These units have no inherent meaning with regard to nursing content and, in fact, have an arbitrary zero point, but logits are practical because the probability of a correct response can easily be computed when the candidate's ability and the item's difficulty are known. Typically, the logit range on the NCLEX-PN scale is from -2.00 (easy items or low ability candidates) to 2.00 (difficult items or high ability candidates).

<sup>2</sup> Estimated decision consistency is an indicator of reliability. Conceptually, it is the proportion of pass-fail decisions that would remain the same if the same population were retested immediately after their first test (assuming no learning or fatigue effects) using a different set of items.

<sup>3</sup> NCLEX-PN Examinations consist of 85 to 205 items.

<sup>4</sup> The standard amount of allotted testing time for the NCLEX-PN Examination is five hours.
